"Etiological Investigations in Hodgkin's Disease. IV. Cultivation in Human Embryo Cells of Virus Adapted to the White Mouse."

Bucharest, Studii si Cercetari de Inframicrobiologie, Vol 14, No 5, 1963, pp 577-581.

Abstract [Authors' English summary modified]: Attempts were made to adapt to human embryo cell cultures 5 virus strains that had been isolated from cases of Hodgkin's disease and passed through embryonate hen eggs and white mice. Two to 3 days after inoculation, the cytopathic effect appeared characterized by the presence of multiple giant cells and massive destruction of the cell layer. Inoculation of the medium from test tubes infected with the Hodgkin agent produced the lethal disease in mice and hemorrhagic lesions in chick embryos. The cytopathic effect of the five strains was identical.

"Specific Prophylaxis in Measles. I. The Preparation of a Vaccine with Modified Live Virus."

Bucharest, Studii si Cercetari de Inframicrobiologie, Vol 17, No 5, 66, pp 371-376.

Abstract: The preparation of an anti-measles vaccine with modified M₆₀₋₅Huang virus on human embryo kidney cells is reported. The vaccine proved harmless for guinea pigs and white mice, and did not produce anaphylactic phenomena in guinea pigs. Anti-measles hemagglutination-inhibiting antibodies in titers of 1/640 to 1/960 were developed in the immunized animals both against the homologous strain and against the MN and Edmonston strains.

Includes 2 tables, 6 figures and 19 references, of which 4 Rumanian, 2 Russian, 2 Chinese, 2 German and 9 Western. -- Manuscript submitted 4 June 1966.

1/1
corresponding values were 75 percent and 1/520. After 4 months the
vaccination seems to confer a specific immunity, which so far has
protected the vaccinated children against measles.

AUTHOR: Yerinov, A. Ye.; Soroka, B. S.

TITLE: General injection equation for mixers operating with variable jet parameters.

SOURCE: Inzhenerno-fizicheskiy zhurnal, no. 4, 1964, 114-120

TOPIC TAGS: Injection burner, gas jet combustion

ABSTRACT: A general equation is derived which describes the mixing of a gas jet and air jet when the gas burns in injection burners operating with variable flow parameters. The nonadiabaticity of the flow of the gas-air mixture entering the tunnel of the burner is taken into account. The solution of the general injection equation makes it possible to determine the nozzle diameter for designing purposes, assuring the required completeness of gas combustion for the assumed geometry of the burner and the predicted jet parameters. It also makes it possible to find the expected air consumption coefficient for a burner of predetermined geometry and jet parameters. The experimental data are in fairly good agreement with the predicted values. Orig. art. has: 2 figures and

AUTHORS: Musatov, T.P., and Soroka, I.F.

TITLE: Converting synchronous compensators to reactor starting

PERIODICAL: Referativnyy zhurnal, Elektrotehnika i energetika, no.4, 1962, 7-8, abstract 4 E44. (Elektr. stantsii, no.10, 1961, 86-87).

TEXT: The auto-transformers and starting-motor methods of starting a synchronous condenser are complicated and unreliable, and so operating circular Э-5/54 (E-5/54) recommends going over to direct-on-line starting, or reactor starting (if the voltage drop on the busbars is too great for direct switching of the machine) with the exciter solidly connected. When the use of a single-bearing starting motor is replaced by reactor starting, the economic effect depends on the pay-off time of the reactor set against the absence of mechanical losses in the starting-motor, thus:

Card 1/2

Converting synchronous compensators... S/196/62/000/004/009/023
E194/E155

$$P_{\text{mech}} = (0.7 - 0.9) \sqrt[3]{\frac{n}{1000}} \sqrt[4]{\frac{1000}{P_2}} \quad (\%)$$

which usually does not exceed 3 years for one synchronous condenser. If there are several machines at the substation and starts are rare, it is recommended to use one reactor for them all, making connections by 'starting' isolators.

Title : The Effect of the Ratio of Sexes in Swine Farrows on the Prolivity of the Swine Grown From These Farrows

Orig Pub : Tr. Kiyevsk. vet. in-ta, 1957, 13, 59-63

Abstract : On the origin of 297 sows of the long-eared white breed from the Breeding Sovkhoz imeni The Tenth Anniversary of October. It was established that the prolificity of first farrows decreases at a decrease in the percentage of female individuals in the litters from which they were selected. It is recommended that, at the selection of female pigs for mating, preference be given to those born of prolific litters in which the male piglets do not amount to more than 40-50 percent.

AUTHOR: Soroka, V., Chief Mechanic SOV-27-56-9-7/28

TITLE: Metallurgists Exchange Experience (Opytom obmenivayutsya metallisty)

PERIODICAL: Professional'no-tekhnicheskoye obrazovaniye, 1958, Nr 9, pp 8-9 (USSR)

ABSTRACT: Mechanics, engineers and senior foremen of trade schools met recently at an inter-republic-seminary in Kar'kov to discuss questions of proper maintenance of equipment, up-to-date repair work and modernization of machinery. Lectures were held by D.T. Ishchenko, Chief of the Ukrainian Republic Administration of Labor Reserves, A.G. Samborskiy, Deputy-Chief of the **Stalinskaya oblast** Administration of Labor Reserves and several instructors of various trade schools. The author expressed his opinion that the inter-republic seminar will help to modernize and improve the equipment of trade schools and district administrations.

TITLE: Self-propelled machine for removing ice from improved road surfaces
Class 19, No. 187067

SOURCE: Izobreteniya, promyshlennyye obraztsy, tovarnyye znaki, no. 20, 1966, 49-50

TOPIC TAGS: ~~airfield clearing~~, airfield maintenance equipment, ~~highway clearing~~,
~~highway ice removal~~, **HIGHWAY ENGINEERING, ICE, SAFETY ENGINEERING**

ABSTRACT: An Author Certificate has been issued for a vehicle for removing ice from improved road surfaces, consisting of a primary vehicle equipped with a chipping attachment, and of equipment for melting ice and drawing off the water. To improve the cleaning of the surface and prevent its damage, on the primary vehicle's frame is mounted a rotor-type chipping attachment with hammers. The hammers are located in spiral lines with overlapping gaps between them, and the rotor unit can be raised or lowered. The equipment for melting ice, located behind the rotor, has a cowl opening from below; in the upper part of the unit, in which the burners are located, blowing attachments are at the front wall, and at the rear wall, which is

Card 1/2

made of an elastic material, is a suction attachment connected to a tank. To this tank is connected the ventilator suction pipe which supplies air to the blowing attachments. The ventilator's suction pipe can be equipped with a safety valve.
